AutoCAD vs Sketchup vs 3ds Max Computer-Aided Design (CAD) – AutoCAD, DraftSight, Inventor, Mobile, Softimage, SketchUp, Creo, 3ds Max Autodesk is a California-based corporation that creates and markets software. Its products include Autodesk Inventor, AutoCAD, AutoCAD LT, Autodesk Revit, Autodesk Maya, AutoCAD Map 3D, AutoCAD Architecture and AutoCAD Plant 3D. Like SketchUp, another desktop CAD software, AutoCAD's first step in conceptualizing a design concept is that you start with an idea and bring it to life. You will also need to communicate with people involved in your project to provide them with essential information about what you are trying to do. AutoCAD is often used to create architectural designs, building information models, civil engineering designs, landscape designs, mechanical designs, 3D printing/additive manufacturing designs, and more. You can create mechanical, electrical, plumbing, pipe, structural, and more. A company can use AutoCAD's design software to prototype parts, floors, walls, doors, windows, cabinets, fixtures, and more. AutoCAD runs on Microsoft Windows operating systems. It uses the Microsoft.NET Framework to provide code and data. Its more than 350 options and controls allow users to customize the program's functions. It is not expensive and you can purchase a license for a home or office at a low cost. Its drawing tools allow you to lay out, annotate, and move objects and annotate them. It is a two-dimensional (2D) drafting program that also uses 3D modeling techniques for creating 3D drawings. SketchUp is a desktop CAD software application developed by Google and is used for creating 3D digital models. It is also known as Google SketchUp or Google SketchUp Pro. It is free, can be used in the browser and on mobile devices, and is for creating geospatial imagery. You can create building models, floor plans, and much more. SketchUp uses collaborative tools to enable you to access, share, and discuss models created in 3D CAD or traditional 2D CAD. You can quickly import and export models to other formats. You can annotate them and add different components. It is free for personal use. You can get

I just saw a tweet that said, Ask "what are you best known for" not "what do you know". What is the exact meaning of "know"? Is "know" a verb? If so, what is the difference between it and "knowing"? A: The OED's first definition of know is: I. To know, to be acquainted with; to have cognizance of. As shown in the definition, the preposition isn't "not" but "for". But if we move on to a second definition, the same preposition is "for": I. For, in the sense of being, or being known by, or in the place of, a particular or specified person or thing. So the original author could be correct in thinking that know isn't a verb, but rather a preposition. This would then mean "What do you know? Is it something about which you have knowledge or a position of prominence?" As pointed out in the comments, the sense of know is actually I. To have information about; to have cognizance of: to be acquainted with; to understand. Compare that with the verb form, as defined by the OED: I. To perceive, understand, or apprehend the nature of. This shows that the difference between the preposition and the verb form is that with the verb, knowledge or perception is something that is being done to or from another thing; whereas with the preposition, knowledge or perception is something that is being known or known about.
