This program enables you to use MAC function keys of your keyboard instead of the mouse. With KEYMACRO you can control the most important functions on your computer with your keyboard instead of the mouse.

Features: \* Keyboard driver. Use your keyboard instead of the mouse for program controls, navigation, drag and drop and many other operations. \*

Favorites. You can save your favorite tasks and return to them later. \*

Customization. Each control can be customized with any color. \* Single-key hot keys. Each function can be assigned

---

to a single key, so you will not have to keep using the mouse. \* Multicursor. You can use one or two hands. \* Drag-and-drop. Select the object you want to move with the mouse and press the keyboard "TAB" key to drag. \* High contrast graphics. \* Single and two-finger scrolling. \* Keys remapping. You can use the program with a standard keyboard. \* Highly configurable. For example, you can customize each function with one or several keys, hot keys or control the windows title bar with your keyboard. \* User-definable hot keys. \* Beautiful graphical interface. \* Multi-platform support. It is compatible with Windows

---

95/98/ME/NT/2000/XP. \* No installation. It is a self-extracting archive. \* Free 30-day trial version. NOTE: The current version does not have any virus protection. We only present a free sample of the installation package without any warranty.

polarview navy map full PolarView Navy Map Full is a very useful tool for sailors and is used for getting the important information regarding the seas. If you are planning to sail on water, then this is the right place for you to store and share the various information regarding the marine and sailing in details. PolarView is a great tool to make your sailing experience easier and more comfortable. It is a full navigational chart-making application and the most complete software for marine travel. You can plan your routes, create custom charts and navigate in unknown waters with more features than any other program. PolarView 6.4.6 Build 9018 is here! This is the 6th release in a series of weekly updates to PolarView. We are happy with the testing that has been done so far, but also have plenty of things to fix. This release is largely a bug fix release. Fixed so that holding

---

the arrow keys in the main application will navigate. (Tested on all platforms) Fixed so that undo doesn't move the position of the action. Added keyboard shortcut support for the main application. Added keyboard shortcut support for the map and charts. Added map border color to the application icon in the status bar and minimize to tray. Added error message for invalid driver settings to the settings application. Fixed so that the use of cranes to prevent collisions has some effect. PolarView 6.4.5 Build 8925 is here! This is the 5th release in a series of weekly updates to PolarView. We are happy with the testing that has been

---

done so far, but also have plenty of things to fix. This release is largely a bug fix release. Fixed so that the Compass View does not auto center when set. Fixed so that links in the Help menu are clickable. Fixed so that the Scale field in the main application is always in the same place. Fixed so that editing a place name in the Map can be done with the insertion cursor. Fixed so that you can change the date format in the Settings application. Fixed so that the Info Window in the Inflate button is updated. Fixed so that the Info Window in the Inflate button is not kept open after the download process has completed. Fixed so that the maps on

---

the Radar screen are drawn over each other when zooming. Updated the Inflate button description to say that the map is being downloaded before it is being displayed. Updated the Inflate button descriptions in the map and the main application to be more descriptive. Updated the drawing state to be more descriptive. PolarView 6.4.4 Build 8807 is here! This is the 4th release in a series of weekly updates to PolarView

**What's New in the PolarView NS?**

PolarView NS has been developed by Byggmester for the purpose of ensuring

---

that it is a user-friendly tool and the purpose of its development has been to create a tool that meets the needs of a user who has a limited budget, as well as the needs of a user who wants to make all the calculations and details of a trip before leaving. PolarView NS has been developed in such a way that every single detail of the trip is accounted for, such as the position of the sun and moon, time of day and night, tides, currents, wind, and weather. The program has been developed for use with any polar navigational device (GNSS, DGPS, Inertial Navigation, Goniometer, Custom Course or Custom Velocity, Theodolite) What are the

---

benefits of PolarView NS? Compared to other tools for marine navigation (GPS positioning, theodolites, etc), PolarView NS offers: Free version (paid version can be accessed from the in-app store) Compatible with any device, such as iOS or Android Up to 32k list in the database The availability of additional third-party data Convenient interface (no complex menus and difficult to follow) Support for multiple activities The program is compatible with multiple devices, both Apple and Android. The program also provides you with additional data, such as the current and historical positions of the sun and moon, the sunrise and

---

sunset times, among other pieces of data. This is particularly useful if you are planning a longer trip and you want to make sure that your departure time is the best, including the good and bad times of the days. The program can also offer you support for multiple activities. For instance, you can choose whether you want to navigate the route with just a GPS device or with a combination of a GPS, theodolite, or other types of instruments.

Furthermore, you can use the program's dedicated database, which consists of up to 32,000 list entries. If you do not know the position of a particular city or port, you can simply type in the

---

address, and you will receive the position of the city on the map in just a few seconds. There are a few options for specifying the position of the city on the map, including navigation with a turn-by-turn guide or navigation with a custom course. In addition to the database, the program has other important features, such as the ability to change the map background to black or white, customize the navigation route, change the route color, or zoom in and out to review your route. Available as an in-app store: How to contact the developer Diet plans can be used as a more effective

---

**System Requirements For PolarView NS:**

**Minimum: OS: Windows XP/Windows Vista/Windows 7/Windows 8 Windows XP/Windows Vista/Windows 7/Windows 8 Processor: Intel Core 2 Duo or equivalent Intel Core 2 Duo or equivalent RAM: 2 GB 2 GB Hard Disk Space: 100 MB 100 MB Video Card: Nvidia GeForce 6600 or equivalent Nvidia GeForce 6600 or equivalent DirectX: Version 9.0 Version 9.0 Network: Broadband Internet connection Recommended: OS: Windows XP/Windows Vista/Windows 7/**
