A DHT (Dehumidifier) or Heat Pump for a Kitchen. A good description of a DHT is here: Dehumidifiers, or "DHTs" (after the company that invented them), are used to control humidity in spaces, as they will remove humidity from the air and prevent it from leaving the space in the form of condensation. But I am not sure if this is suitable for a Kitchen or Kitchen-style room. Are there any studies or experiences on DHTs in this type of environment? A: Yes, it is possible to have a DHT in a kitchen. As long as you pay attention to power consumption, you will be fine. The only issue I see is that cooking times may be reduced due to the increased heating or cooling time needed to raise/lower the temperature of the air. Q: Deriving the probability density function for the sum of two random variables $$f(x,y)=f(x-y)$$ $$f(x,y)=\frac{f(x-y)}{f(x)+f(y)}$$ I have worked out the first but need help on the second. A: \begin{align} f(x,y) &= \frac{f(x-y)}{f(x)+f(y)} \\ &= \frac{\frac{f(x-y)}{f(x-y)} \frac{f(
