But it is not possible. Any pointers will be appreciated. Thank you. A: Problem solved by replacing the sqlite database in the package. Main problem was trying to use a sqlite database within a package. When I restarted the tool as a local service, it works perfectly fine. My next challenge is to implement the "Start" option. This invention relates to an apparatus for verifying the position of an image on an object. More particularly, it relates to an apparatus for verifying the position of a coating on a wafer using bright field imaging techniques. In the semiconductor industry, the ability to test each die on a wafer to determine whether the die has been properly processed is important. For example, proper processing of each die involves application of an integrated circuit pattern, such as a metal layer, to the die surface. The integrated circuit is often referred to as a wafer. Defects in an integrated circuit may interfere with the operation of the circuit. For example, a void or hole in a metal layer may not be detected until after the integrated circuit is assembled into a package. In other cases, proper processing does not depend upon the formation of a metallic layer over the wafer surface. For example, in the formation of a dielectric layer, the dielectric layer may be formed to a uniform thickness over the entire wafer surface. However, it is still desirable to test each die to determine that the proper thickness of dielectric has been applied. One method for verifying the thickness of a dielectric layer is to measure the thickness of the film after it is applied. However, this may be difficult, since the film may not be uniform across the wafer surface. As another example, a void may be present in a particular die. The presence of this void may not be detected until after the package is assembled. In accordance with the invention, a method for verifying the position of an image on a wafer is provided. The method includes the step of directing a beam of light at the image on the wafer. A detector is used to measure the intensity of the beam of light reflected from the wafer. The measured intensity of the reflected beam of light is compared to a reference value. The detected intensity of the reflected beam of light and the reference value are used to determine the position of the image on the wafer. In accordance with the invention, the intensity of the reflected beam of light is measured by
