Avira Password Manager is a cross-browser extension that allows you to safely store your passwords for every site where you need to register an account. These are all protected by a master password which you need to set at the very beginning, and you must always remember; you won't be able to recover it in case you forget it. Avira Password Manager doesn't require you to log in and it's available at no cost. For this reason, we've created a simple trick for you to let you view your presentation in the order you'd like. All you have to do is remove the 'elements' tab from the drop-down menu and replace it with the word 'paper' (just be sure you enter the word exactly like that). Of course, this is just the beginning, and we still need to teach you how to manipulate your slides using Microsoft Word. The secret of the 'elements' tab There are three options you'll find in the drop-down menu: 'elements', 'paper', and 'slides';. Let's see what each of them is used for. Microsoft Excel® can be considered as a tool that
