Solved: Well people are moving to Windows 7 and so should I. However, my trusty (and ancient by electronics standards) Minolta PageWorks/Pro 25. . . doesn't accept my PDF files unless I open them as a Word document. Are there other ways to open them? I've tried opening every page in PDF with "Open With", but for some reason it always opens the file as a Word document, without any options to change that. I can open the file on another printer if I can change the format to something PDF, but that's how I'm supposed to use the printer. If I go to "File" > "Open With" and select "Word"
