Source: Autodesk Autodesk's official homepage for AutoCAD 2017 History of AutoCAD AutoCAD, originally named Dimensional Modeling System, was developed by the architects Jay W. Walls and Rob K. Luebke in 1980. The team consisted of Walls, Luebke, John Blythe, William S. Blythe, and Joseph Succi. To satisfy the needs of the general contractor and owner, Walls and Luebke developed a system that could produce house plans, sections and elevations, and sections and elevations that could be cut for construction. Jay W. Walls came up with the idea of developing a dimensional modeling system to ease the tedious process of drafting a blueprint by hand. Walls had worked as a draftsman and architectural designer for a number of years, and was frustrated with the time and resources required to develop a drawing that was actually useful. When he returned from a trip to Tokyo, he noticed that architects were using a 3D design system similar to the one he was developing. These architects used a system that was similar to the concept of 2D engineering drawing, which Walls thought should be integrated with the drafting process and not be left to a separate, expensive and time-consuming drafting system. Autodesk was founded in 1982 by Jay W. Walls and Frank K. Burgess, and AutoCAD became their first product. The name AutoCAD stands for "automatically creating computer-aided drawings". This name was chosen because the system was thought of as an automatic drafting system. This name stuck even though the company later started working on non-CAD related products such as print management and design for retail. Jay W. Walls, an industrial designer, was the technical brains behind the program, which he designed and had some assistance from his brother Rob K. Luebke, a technical draftsman. He also provided much of the writing and technical support for the product, his company, AutoDesk, was named the contract manufacturer for the product. AutoCAD 1982 On December 16, 1982 AutoCAD was officially released and priced at \$12,000. The company had developed AutoCAD as a system to enable architects and engineers to use the computer to draft their designs, and this was one of the reasons why it was not designed to compete with existing CAD programs such as AutoCAD r12, Microstation, Vectorworks and many others.
