tasks easily. The biggest difference between the two apps is the file size. Photoshop Elements compresses images, while Photoshop uploads the same images from your computer in their full size. The above difference will affect the speed at which your images are edited in Photoshop Elements. When opening an image with Photoshop Elements, you can always use the 2× and 4× Zoom tools to enlarge and reduce the image. You can also duplicate and delete images with a shortcut to the trash bin. To see a larger version of an image, you need to open an image in Photoshop Elements and adjust the Picture Size settings. The Picture Size settings are located on the right side of the screen. There are 4 presets for the canvas size in Photoshop Elements: The Art preset is for images that are to be printed or drawn. This is a fairly detailed image, and the resolution is lower than what you see on the web or on a computer screen.

LONDON (Reuters) - Oil prices retreated on Friday after a late move higher in U.S. equities and concerns over a volatile global market weighed on the market. FILE PHOTO: A worker walks as he takes a picture of a petrol pump in Santa Ana, California, U.S., January 24, 2017. REUTERS/Mike Blake/File Photo Brent crude LCOc1 settled down 0.7 percent to \$51.71 per barrel after briefly rising above \$52, while U.S. West Texas Intermediate (WTI) crude CLc1 fell 0.4 percent to \$48.79. Oil has plunged 18 percent since Feb. 5, hitting \$55 a barrel on Monday, with investors and governments scrambling to assess the scale of the coronavirus outbreak in China and its impact on oil demand. The slump has been caused by the impact of the outbreak on global manufacturing, airlines and a reduction in demand from global growth and the world's largest consumer of oil, China. U.S. stocks were in shock at opening on Friday after a New York drug company reported a "likely" case of Covid-19, a coronavirus strain similar to the one behind the Sars outbreak in 2003, leading to questions over a second wave of infections. Chinese stocks also slumped on an investor jitters. U.S. stocks started a session lower on Thursday after a Wall Street Journal report that an executive at an American telecom equipment maker is among the infected. The price of Brent and WTI are down about 30 percent this year after a strong recovery from about \$27 in January and February. "We're seeing an overhang of some sort of general investor sell-off going into New York... so we're paying the price for that in the market," Gene McGillian, director of market analyst at Tradition Energy in Stamford, Connecticut, told Reuters. China is the world's biggest oil consumer and the biggest energy user by economic output, accounting for close to a fifth of global oil consumption. In recent years Chinese demand has been rising faster than global supply. However, the latest data has added to worries that a new wave of the virus could hurt activity. Consumption shrank 1.3 percent in February from January. "The severity of the situation, the potential economic impact on the country, all of that is

Batch mode will automatically apply actions to all selected objects. Yes | No | Yes How? Create a new Photoshop document Fill the new document with any foreground color Enter the HSL Channel: See the below image, a color wheel used to pick up a color from RGB (i.e. "Red") and to further transform it to the HSV spectrum (Hue, Saturation and Value). The Hue value has the most of the impact on how a color looks like The Saturation changes the brightness of the color and adds an intensity to it The Value changes the gray scale of the color, altering its richness. Using the properties of HSL, we can select the Hue value of the desired color (see below image: Dark red), and use the above formula to calculate the HSL color:  $H = \text{Intensity}/360$  or it can also be calculated with a simple formula:  $H = 255 * S - 128 + (200 - 128) / 2 = 204 + 20 = 224$  If we move the Hue to blue (i.e. 135) the result becomes: The formula is a little more complex, but it only differs from the previous step in that the Hue is divided by 135 instead of 255. The Hue sets the saturation or tint of a color, while the S
