mz.124-15.T10.bin, View [Detail](#). c3725-adventerprisek9_ivs-mz.124-15.T11.bin, View [Detail](#). c3725-adventerprisek9_ivs-mz.124-15.T12.bin [Detail](#) .

Ideally, this will be c3725-adventerprisek9-mz.124-15.T10.image in the

/home/user/GNS3/Images directory. * If you intend to run the GNS3 Vault exercises, [e79caf774b](#)

Just need to confirm if the above mentioned image is the "real" image or not and also can I load that image. I need to load that image on my GNS3 server. C3725-adventerprisek9-mz.124-15.T10.bin Sorry for a little confusion but "C3725-adventerprisek9-mz.124-15.T10.bin" is an image file that should be load in your GNS3. I'm trying to decide how I should go about deciding which image to load in GNS3. Anyone have any

suggestions? Any help is appreciated. Thanks, Andrew A:

IOS images are pretty straightforward to test. You should be able to run the `vndk ipxe` command to load a pre-written image file into your VM. You can also test the various `ios` commands through the `vncterm` command. For example, this is how you'd load the `C3725-adventerprisek9-mz.124-15.T10.bin` file into GNS3: `# vncterm C3725-adventerprisek9-mz.124-15.T`

```
10.bin GNS3> Device = c3725
GNS3> Switch = switch1 GNS3>
Interface = 1/1 GNS3> Async =
true GNS3> SaveFile =
TESTIMAGE.qcow GNS3>
VNCTermStart Error: No device was
selected GNS3> vndk ipxe C3725-a
dventerprisek9-mz.124-15.T10.bin
You can download pre-written files
from our File Library. Source: An
additional note, ensure that when
you load an ios image you're using
GNS3 not the vncterm tool. The
```

vncterm tool is the old way of interface imaging.
