With USB 2.0 or USB 1.1/1.1, and with the USB 2.0 DF-7100 Series, the

maximum number of hosts possible. Q: What to check when returning to the main() routine from a function I'm new to C++ so I'm pretty sure I'm doing something stupid. I want to understand more about the flow of programs in general, and how to handle potential errors and return values. I have a function that returns some data. If the data is null, an error code is returned. In my main() routine, I am testing to see if the return value from the function is equal to my null value of

NULL. If it is not then I want to handle the error and print a message to the user. I have this test in place:

```
int myFunction() { int * someArray; if (someArray == NULL) { return 1; } else { //do stuff return 0; } } if (myFunction() == NULL) { //print error message } else { //do stuff }
```

When I run my program though, when I return to the main() routine, I do not make it to the "
