The first AutoCAD release was a PC version, but only on the Microsoft Windows operating system. AutoCAD was originally released for the IBM-compatible PC, but many of the newer releases are now compatible with Apple Macintosh, Microsoft Windows, and Linux-based systems. The earliest version of AutoCAD was 4.5. In November 1984, AutoCAD 2.5 was introduced. In July 1986, AutoCAD 7.0 was released. The AutoCAD 2017 update added several new features, including an enhanced XRef database (XDB) and a new layer filtering dialog box. In addition, this update supports several new camera and lens types, a new block editor, and a new Appearance panel. AutoCAD was created by Ron Proulx, a member of the Editorial department of the Department of Civil Engineering and Architecture at the University of Calgary, Alberta, Canada. In 1981, he worked as a computer programmer for Reengineering of Systems Inc. (now known as Reengineering-Design Automation Inc.) in Sausalito, California. At the end of 1981, he left Reengineering and joined the University of Calgary. He completed his B.Sc. degree in computer science in 1983. In the early 1980s, he was one of a number of academics and engineers at the University of Calgary, Alberta, who were working to develop CAD software for engineering use. The CAD tool eventually developed was called ECAD (EDition, Calculation, Analysis, Design), which was launched in 1981. The following year, it was renamed AutoCAD and was released for purchase from the University of Calgary in 1982. Prior to the release of AutoCAD, the university needed to create a software package that was inexpensive enough for the majority of users who would be within universities and public engineering offices. In 1981, Ron Proulx joined the Editorial department of the Department of Civil Engineering and Architecture, where he worked until 1984 as a developer and writer. Proulx was the one who created and wrote the ECAD software, with fellow academic Gary Bell, working on the financial and marketing side. At the time, Proulx worked for Reengineering-Design Automation, Inc. (Reengineering), a computer consulting firm in Sausalito, California. By 1981, the need for CAD software was high, and university students had become interested in computer-aided design. The ECAD CAD package was created by Prou
