In 2009, AutoCAD was considered to be the de facto standard for architectural design. History The history of AutoCAD, along with the history of AutoLISP, is very closely linked to the history of the DEC PDP-10. These were the original "workstations" that AUTOCAD ran on. There is an earlier predecessor to AutoCAD, known as AUTOCAD T, which appeared in 1980. This early version of AutoCAD is very similar to what AutoCAD did later on, but it lacked most of the functionality we now know of today. AutoCAD Free Download's new 2007 release supports the Microsoft.NET Framework through the use of the Addin Manager and the DLL language. In AutoCAD 2012, the extended object browser (XDB) was released. The XDB replaces the old object browser, and is similar to VBA or Visual LISP. XDB is available in versions 2010, 2011 and 2012. XML The previous AutoLISP, Visual LISP, and VBA development interfaces for AutoCAD each use XML files to store configuration information. These include the option boxes (OPT) file, the block list (BLKLIST) file, the CSPOPT XML files, etc. In addition, XDB XML files store the objects in the drawing (block/operators/layers/mixed/properties) and their attributes (e.g. color, position, radius, etc.) There are two types of XML files: "AutoCAD" (ACAD) files, and "Organizer" (ORG) files. XDB files can be used to read and write XDB files on disk. AutoCAD can read and write XDB files as a part of the DRAW (R2007) program. This allows the XDB XML files to be used to read and write " AutoCAD " files on disk. Programming While AutoCAD is not traditionally a programming language, it can be used for coding and extension (customization), as well as the generation of code from drawing templates. AutoCAD also supports the use of different languages to develop custom tools. AutoLISP AutoLISP is the native development language in AutoCAD and is available for AutoCAD Classic, AutoCAD LT and AutoCAD 2007. The latest version, AutoLISP, is available on Autodesk Exchange Apps (for AutoCAD 2008 and later) and Autodesk Exchange Software (for AutoCAD 2007 and earlier). AutoLISP is a "lisp" language similar to the interactive lisp language. AutoLISP is much faster, and supports much more functionality and graphics, than VBA. It is the main development language for AutoCAD (and other AutoDesk products) in the past. It is still supported, but with much lower priority than VBA. The language is not completely compatible with AutoCAD of the past. Visual LISP af5dca3d97
